Overview & Experience Summary

Warren is a Consultant and Architect with over 20 years' experience working within business and IT, both in a permanent and consulting capacity. He has worked at sites across Australia and overseas in a variety of industries including Finance, Utilities, Telecommunications, Manufacturing and Distribution, Food, Pharmaceuticals, Education, Defence, Construction, IT Servicing and Government (local, state and federal). His experience is wide and varied, more recently as a consultant specialising in Business Intent elicitation, Business Capability Modelling and Transformation Roadmap Design.

Warren has excellent written and verbal communication skills allowing him to communicate effectively with both a technical and non-technical audience. He has a proven ability of producing and leading teams to produce high quality written artefacts of a technical or business-oriented nature for consumption at all levels of an organisation.

Warren has worked as a Principal & Lead Architect on multiple successful transformation engagements:

- Lead establishment of EA and Transformation Roadmap for Energy Development Corporation. Supported extensive executive engagement on EA, AI and Transformation Roadmap activity.
- Lead design of EA establishment plan, capture Business Intent, Business Capability Model, Current & Target State and 5-year Transformation Roadmap & prioritisation for Coal LSL. Lead delivery of Architecture Governance establishment including charters, processes and bodies.
- Business & Customer Architecture design & Business Capability Modelling review for an Australian Federal Government Department.
- Lead design of EA Governance charter, processes, artefacts and strategic reference architectures for key business and technology domains for Aboitiz Group. Lead and support transformation and enterprise architecture design services for Aboitiz Power.
- Lead design of enterprise architecture artefacts and technology roadmap to support 5-year technology planning to support AEV and Aboitiz Group conglomerate needs.
- Lead development of current state assessment of SACE Board SA's technology systems.
- Develop enterprise architecture artefacts and roadmap estimates to support 7-year technology planning for growing Aboitiz InfraCapital.
- Develop Business Capability Model, current state assessment, heat maps and documentation to identify a target state architecture and an executable technology roadmap to support multi-year transformation for Sigma Healthcare.
- Development of business intent, capability model, current state, and heat maps to support executable transformation roadmap. Solution delivery estimation, vendor engagement and production of Pilmico's 5-year Technology Roadmap.
- Develop enterprise architecture artefacts and roadmap to support technology planning for operations of a green field cyber organisation for the Australian Cyber Collaboration Centre.
