Overview & Experience Summary

A high caliber outcomes focused Project Manager with over 20 years experience in Digital Transformation. Geoff has led cross-functional teams in the delivery of digital products and services to agreed time, cost, and quality criteria.

Within SA Health he project managed the Site Configuration and Devices project streams for a $420M enterprise eHealth program in readiness for activation at two metropolitan hospitals of 300 and 800 inpatient beds by achieving the following:
- Transition from Current State to Future State Device Audit from paper based to electronic health records.
- Managed configuration impacts to various new and legacy systems.
- Managed the process of collecting and configuring 7,000+ staff with their approved security profiles.

He completed a 12-month secondment in the United Kingdom to project manage and implement a $2.5M portfolio of system enhancements with an independent financial advisory company offering online services including: Self Invested Personal Pension (SIPP) and Wrap products. This project included stakeholder engagement with 3rd party providers, integration with Advisory back-office systems, all the while maintaining the high levels of compliance required within the financial industry.

Geoff successfully led a development team within Justice Technology Services to work in collaboration with Court Administration Authority, SA Police and Department of Correctional Services to deliver real-time integration services relating to the raising and cancellation of Warrants for SA Police.

He has specialised in project delivery for many large State Government and National companies; this has included projects for business, web, mobile and integration development, implementation, digital transformation and change projects. This has also included delivery of staff training to upskill on recently integrated applications.

Fragile to Agile
